Introduction to ECCO

ECCO is the first and only (thus far) system for Xiangqi openings that I have found.

http://www.xqbase.com/ecco/ecco_intro.htm

It first appeared in 2004 and was written by Mr. Huang Chen and his team of Xiangqi enthusiasts. It was created to help categorize openings for their Xiangqi website, www.xqbase.com.

ECCO is the acronym for "Encyclopedia of Chinese Chess Openings" and is a reflection of contemporary Xiangqi openings.

Some of its merits include the ability to categorize the less seen openings like P1+1 or A4+5 while at the same time being able to list the commonly used openings like the Central Cannon vs. screen horse defense with edge cannon for chariot exchange variation.

According to the information given on the site, it was initially called ECCO 2004 as there were 8197 games collected that were played before 2004. These games were analyzed and categorized by the authors to produce ECCO.

Traditionally, "orthodox" Xiangqi openings/counters were simply classified as one of the following:

- a) cannon openings (Central Cannon, palcorner cannon, cross palace cannon)
- b) elephant openings,
- c) horse openings
- d) pawn openings.

"Unorthodox" openings like the one-horned monster 独角兽, the nine-tailed tortoise 九尾龟, tandem cannons counter 叠炮, golden hooked cannons 金钩炮, phoenix cannons counter 凤凰炮 also known as the Turtleback Cannon 龟背炮, etc.... were unclassifiable. ECCO has been able to overcome this situation.

Basic ECCO classification:

There are five broad categories to ECCO.

A) Non-Central Cannon openings (not inclusive of the Angle Pawn): inclusive of the Elephant opening, Horse Opening, and other less commonly used openings like P1+1/C2=3 ...

B) Central Cannon vs. Sandwiched Horse Defense

C) Central Cannon vs. Screen Horse Defense

D) Same Direction Cannons and Opposite Direction Cannons (inclusive of the Deferred Opposite Direction Cannons)

E) Pawn Openings

Each opening and counter is represented by a capital letter (A-E) followed by a two-digit number. For example, D28 would refer to Same Direction Cannons: filed chariot with double-headed snake pawn formation vs. ranked chariot.

The authors emphasize merit over ECO (Encyclopedia of Chess Openings) for international chess in that there have been allotted extra digits to make way for possible future "orthodox" variations.

How the ECCO label is formed:

The ECCO label is arrived based on the following criteria.

a) The order of the moves.

Based on the "opening tree" (that is, the algorithm you get when you take into consideration ALL the possible opening moves), most NON-Central Cannon openings will arrive at some standard formation. This formation would then be given an ECCO label. For example, A40 (a variation of the horse opening) would refer to the same formation arrived even though the pawn opening may be played first.

b) The process of making the moves.

The order of first few moves that are played before a predetermined formation is arrived may not influence the final formation. It has been a problem for the authors of the classification system, but generally, as long as the moves are played in a logical order and can arrive at the same formation, it would be given the same label.

For example, in the double-headed snake pawn formation, it would not matter much if P3+1 is played before P7+1 or vice versa, and as long as both moves are played, it would arrive at the double-headed snake pawn formation.

To further validate this point, D28 is given as the label to represent the following opening, "Same Direction Cannons: Filed chariot with Double-headed snake pawn formation vs. Ranked Chariot. It would not matter if Red played P3+1 or P7+1 as long as both moves are played, it would be the double-headed snake pawn formation.

c) Formations occurring with high frequencies:

In openings where it is very commonly played, the classification becomes trickier. The authors have determined which predetermined formation is reached first, and the moves that follow would be designated as its variation.

The Central Cannon vs. Screen Horse Defense is THE most played opening. In such an instance, ECCO would have labeled many different common formations. It takes into consideration that the same formation CAN and WILL be arrived from a different order of moves. For example, in perhaps the most commonly used opening, the Central Cannon 7th Pawn Advancement with Pawn Ranked Chariot vs. Screen Horse Defense 7th Pawn Advancement is designated as C30-C49. There are 24 possibilities for the order of moves to arrive at this formation. In this case, the authors have recognized the primary formation, and the rest of the moves will be variations or sub-variations of this opening. Therefore, if Black played the Edge Cannon for Chariot Exchange variation, it would be labeled as C49. C49 is considered to be a variation of the Central Cannon 7th Pawn Advancement with Pawn ranked Chariot vs. Screen Horse Defense with 7th Pawn advancement and Edge Cannon for Chariot Exchange variation.

Opening Classification: ECCO A00-A3x Classification Codes

The moves shown below are the moves required to generate the ECCO label. I have tried my best to translate them into English with official WXF nomenclature. A million thanks must be expressed to Mr. Georg Jeiter for helping me proofread them and informing me of the various corrections.
